Keep Your Customers' Payments Safe

Your customers trust you to manage their payment and card information in a secure manner. With Secured by Elavon, you can have the confidence and peace of mind that your business is taking card payments safely, on and off line.

Secured by Elavon offers some of the best payment security and fraud prevention products in the market, all designed with the sole intention of keeping your customers and your business safe.

Key benefits:

- ✓ Reliable payment security
- ✓ Build customer loyalty
- ✓ Help protect business reputation
- ✓ Peace of mind

Introducing PCI Compliance

All businesses that take card payments have a responsibility to keep their customer information and payments safe. This is why card schemes, such as VISA and MasterCard, require businesses to be Payment Card Industry Data Security Standard compliant, otherwise known as PCI DSS for short.

Put simply, PCI DSS is a set of standards that make sure your processing environment is secure, and at the same time, protect your business from the risk of reputational damage associated with a fraud incident.

Achieving certification and maintaining compliance is easy with Secured by Elavon - there are two PCI Compliance products for you to choose from, Secured PCI and Secured Pro.

Key benefits:

- ✓ Protect customers' personal data
- ✓ Keep business data secure
- ✓ Achieve certification
- ✓ Avoid non-compliance fees

Elavon can help you achieve PCI DSS Compliance, to make sure your customers and your business are protected from potential fraud.

"I'd recommend anyone to talk to Elavon as they've really helped our business grow."

Lucy Chapman

Director, Stolen From Susie

1. PCI – compliance managed by you

There are 5 steps to achieving PCI Compliance, which we will guide you through. Once complete, you'll activate certification for the year ahead, and enjoy the peace of mind that you're protected from the potential threat of unwanted and costly card fraud.

Key benefits:

- ✓ Saves you time and worry
- ✓ Card fraud protection
- ✓ Extensive security scan checks

2. Secured Pro – compliance managed by Elavon

Your business keeps you busy enough so you might prefer to save time and let Elavon manage your PCI Compliance for you – if you do, then Secured Pro is the right option for you. Secured Pro, managed by Elavon, offers you enhanced protection against fraud and payment security breaches, making sure your business looks after its customers and its reputation.

Whether you're signing up for the first time or renewing, Secured Pro means we manage your compliance process for you, contacting you when an action is due and working together to complete it successfully. No more worrying about your certification expiring or your fraud processes not being up to scratch. What's more, with Secured Pro you also benefit from our PCI Waiver Programme; depending on your level of PCI compliance, liability for fines may be waived. For more information visit elavon.com/pci.

Secured Pro in detail

A non-compliant payments processing environment is susceptible to a security breach, such as a hacker stealing your customers' payment card information. Secured Pro includes a range of scan checks that ensure your payments processing environment keeps the bad guys out and protects your business against the potential risk of fraud:

Network Perimeter Scan

This scan assesses the security position of your internet facing systems for any vulnerabilities, providing you with a report that shows you where possible entry points are so that you can close them up

Device Security Scan

Protect your computers and mobiles with this scan – it detects any stored customer card information and analyses the system for any current cyber-threats, viruses and malware for peace of mind that your devices are vulnerability free. It's possible to scan one or thousands of devices in seconds

Cardholder Data Scan

Protect your computers and mobiles by running this scan. It helps you find and remove any unencrypted credit card numbers on your network. By identifying where you store payment card data you can securely remove it, dramatically reducing the scope of your PCI DSS assessment

Antivirus Protection

Fight the hackers and ensure your devices are not infected with viruses and other malware, which can disrupt and potentially damage your business

PCI DSS External Vulnerability Scan

A quarterly scan of all IP ranges and domains to identify any areas of weakness

compulsory

POS Application Discovery Scan

It's important to regularly check and verify your point-of-sale (POS) application against the PCI Security Council list of approved POS Applications to ensure your compliance
